

Tony LaVoi

Manager of the GIS Integration and Development program at the National Oceanic and Atmospheric Administrations (NOAA) Coastal Services Center in Charleston, South Carolina. The GIS Integration and Development (GIS I&D) program's mission is to provide readily accessible, geospatial information, data, tools, and services to the coastal resource management community. GIS I&D specializes in linking the technical benefits of GIS, the Internet, and related technologies with the needs of its customers to enhance their decision making capabilities. GIS I&D accomplishes its mission in a number of different ways: spatial data development, data integration and metadata documentation, decision support system development, software application development, database programming, web page development and maintenance, training, outreach, and technical support. In addition, Mr. LaVoi is currently chair of the NOAA GIS Committee and also co-leads the National Ocean Service's Enterprise GIS project, an effort to develop a unified and coordinated enterprise approach to spatial information management, utilization, and access across the Ocean Service.
